## COURSE OVERVIEW

How can you make a significant difference in your organization? One way is to be part of a project that improves the company's performance or launches it in a new direction. The business analyst (BA) plays a key role in the development and execution of company projects. Maybe it's a new product launch or a change to a more efficient software package. The BA is responsible for gathering input, analyzing the needs of the project, documenting the criteria to be met, sharing information among project team members and presenting findings to company executives.

This course will provide a solid foundation for a career in business analysis. We explore the strategy, phases, components and process a BA uses to develop a project. From conducting an enterprise analysis to assessing the solution's implementation, you will learn the basics of how to manage the process and determine the appropriate parties to be involved.
